Re: Screening of Waste, Canyon Fuel Company, LLC, Sufco Mine

Dear Daron:

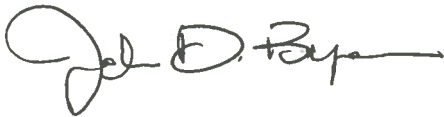

Due to a delay in our most recent long wall move, our coal production has been delayed, making us unable to meet the specifications of a coal contract. The contract is for coal with a higher ash content than currently mined. We have determined to meet the contract we need to place a mobile screen at our waste rock site to size the material going to the site in order to separate a 2-inch minus rock to blend with our stockpiled coal. The excess material not meeting the size requirement will be placed in the site and processed according to the approved permit. The screening process will be completed by the end of November and will take place within the area designated for waste rock placement.

We have requested air quality permitting for the screen from the contractors bidding the project.

We would appreciate your sharing this information with your staff.

If you have questions or need additional information please contact Vicky Miller at (435)286-4481 or John Byars at (435) 286-4420.
